

Noise Com Appoints New Representative for Sales and Support Engineering in Southeast

Leading US manufacturer of Noise Sources and Generators Signs On New Sales Organization for Southeastern US

Parsippany, NJ - January 1, 2003 – Noise Com announced today the signing of Sunforce, Inc. to provide sales and support in the Southeastern US, encompassing the states of Florida, Georgia, North Carolina, South Carolina, Alabama and Mississippi. Sunforce brings an experienced staff of sales professionals focused on design, development, and test solutions within the electronic manufacturing industry. As a strategic business partner of Noise Com, Sunforce will provide sales and application engineering support for Noise Com products and services across a broad range of test solutions in the electronics community, with special focus in Military/Aerospace, RF/Wireless markets.

Noise Com is a leading U.S. manufacturer of noise sources and generators, and is recognized as a leader in power measurement and analysis of RF and microwave systems used in both military and commercial sectors.

About Noise Com

Founded in 1985, Noise Com has been serving the commercial and military communication systems testing market for over a decade. Until late 1991, the majority of Noise Com's business was derived from government and military contracts. The company's products during this period, generically known as noise source devices, were and still are used as a cost-effective method of testing communications systems to determine if they are receiving and understanding the information being transmitted. The initial military application of these products was to disturb and jam enemy radar and communications, and to insulate friendly communications.

Though first developed for the military, noise devices began to be used more and more in commercial applications. Besides being much less expensive than other modes of testing, noise devices produce faster and more accurate results. Through constant focus on creating greater use in the commercial market and the introduction of new lines of test equipment designed specifically for the emerging wireless telecommunications market, Noise Com rapidly grew to become a leading provider of wireless and satellite test solutions in addition to noise test solutions.
